### UTILITY PATENT APPLICATION CLAIM

#### COVETS

I claim that COVETS is the only product that will be offered to the public in this design of plastic with two types of different fastens to chose from. There are three different lengths and width offered for body parts depending on age and size, for the areas of the hand up to shoulder and foot up to thigh. COVETS chest to waist differ by age and size. While some other similar products try to accommodate people by having excess plastic at the top and then have them cut the plastic at a certain point to adjust the plastic, I find this to be a waste of plastic. COVETS may be applicable in other areas, but it is mainly for protecting areas of injury that maybe covered by a cast or bandage, COVETS will protect these areas from large amounts of water or liquids in bathing or other situations.

1. I claim that while COVETS main purpose is to cover a cast or bandage, but is not limited to that purpose, it can cover what ever area a person needs to protect it from liquid or other situations. It is stated in other patents that there sole purpose is just to cover and protect cast and bandages. There are some covering inventions that use absorbent pads or a chemical gel to absorb any in coming water, which may imply that water, will get in.

2. I claim that COVETS is the only product that I find to offer a body proportion for age and size, from infant up to adults with the chose of fasten, string or plastic belt with a metal buckle for the hand to wrist, hand to elbow, hand to shoulder, foot to ankle, foot to knee and foot to thigh, in the shape of Fig. A, Fig. B, Fig. C, Fig. D on page 9A, in consideration of the patents starting on page 6B. There are other patents that offer different shapes and different fastens. There are fastens that are elastic, which can pose the problem of continual constriction on an area.

### COVETS

There are fastens that are not attached , which you have hold in place while you fasten it. Adhesives or gels pose the problem of skin irritation also the ability to stick if they come in contact with dust powder, oil and etc., usually have the ability to stick once, all of this is not described with COVETS.

3. I claim that COVETS chest to waist is the only product that I find to offer a body proportion for age and size, from infant up to adult. COVETS also will be offered with a chose of two different types of fasten, string which runs through inside fold at the top and bottom of the body of COVETS or plastic belt with metal buckle which is attached to the circumference.

4. I claim that COVETS seeks to be cost effective, none chemical, not wasteful and not complex. There are other covering inventions that offered more high tech, chemical, wasteful and complex parts that are for cast and bandage covering. There are inventions that offer one long piece that you may cut to size, this is costly and wasteful compared to pre cut to size. There are inventions that offer a process of chemical adhesive to skin which could cause skin irritation, you will not find that in COVETS. There are covering inventions that are complex, in that there are parts not attached or partially attached to the covering which have to be positioned, in some cases there is more than one part to a covering, some parts have to have water touch it before it will respond.

5. Description of prior patents that, are incompatible to COVETS.

All of these patent, were designed with the intent to cover and protect with safety in mind, however they differ from COVETS in one way or another. US patent no. 6,126,621 (Santiago Aceves) absorbent interior and plurality of cinch; US patent no.4, 911,151 (Paul Rankin) not the same shape as Covets, stretchable plastic strip, not permanently attachment.
